# JS Keycode

Inside index.html, type the following:

```html
<h1>Keycode Generator</h1>
<input type = "text" onkeypress = "keycode()">
<p id = "keycode">Keycode</p>

<script src = "app.js"></script>
```

And in app.js:

```javascript
function keycode(){
    let key = event.keyCode;
    console.log(key);
}
```

This will generate the key and display in console when a key is pressed in the input.
(There are other approaches too)

# Task: Keycode generator

When a key is pressed, the browser shows:
- event.key
- event.code
- event.which

72

event.key    event.code    event.which

h            KeyH          72

72

event.key | event.code | event.which
h | KeyH | 72
